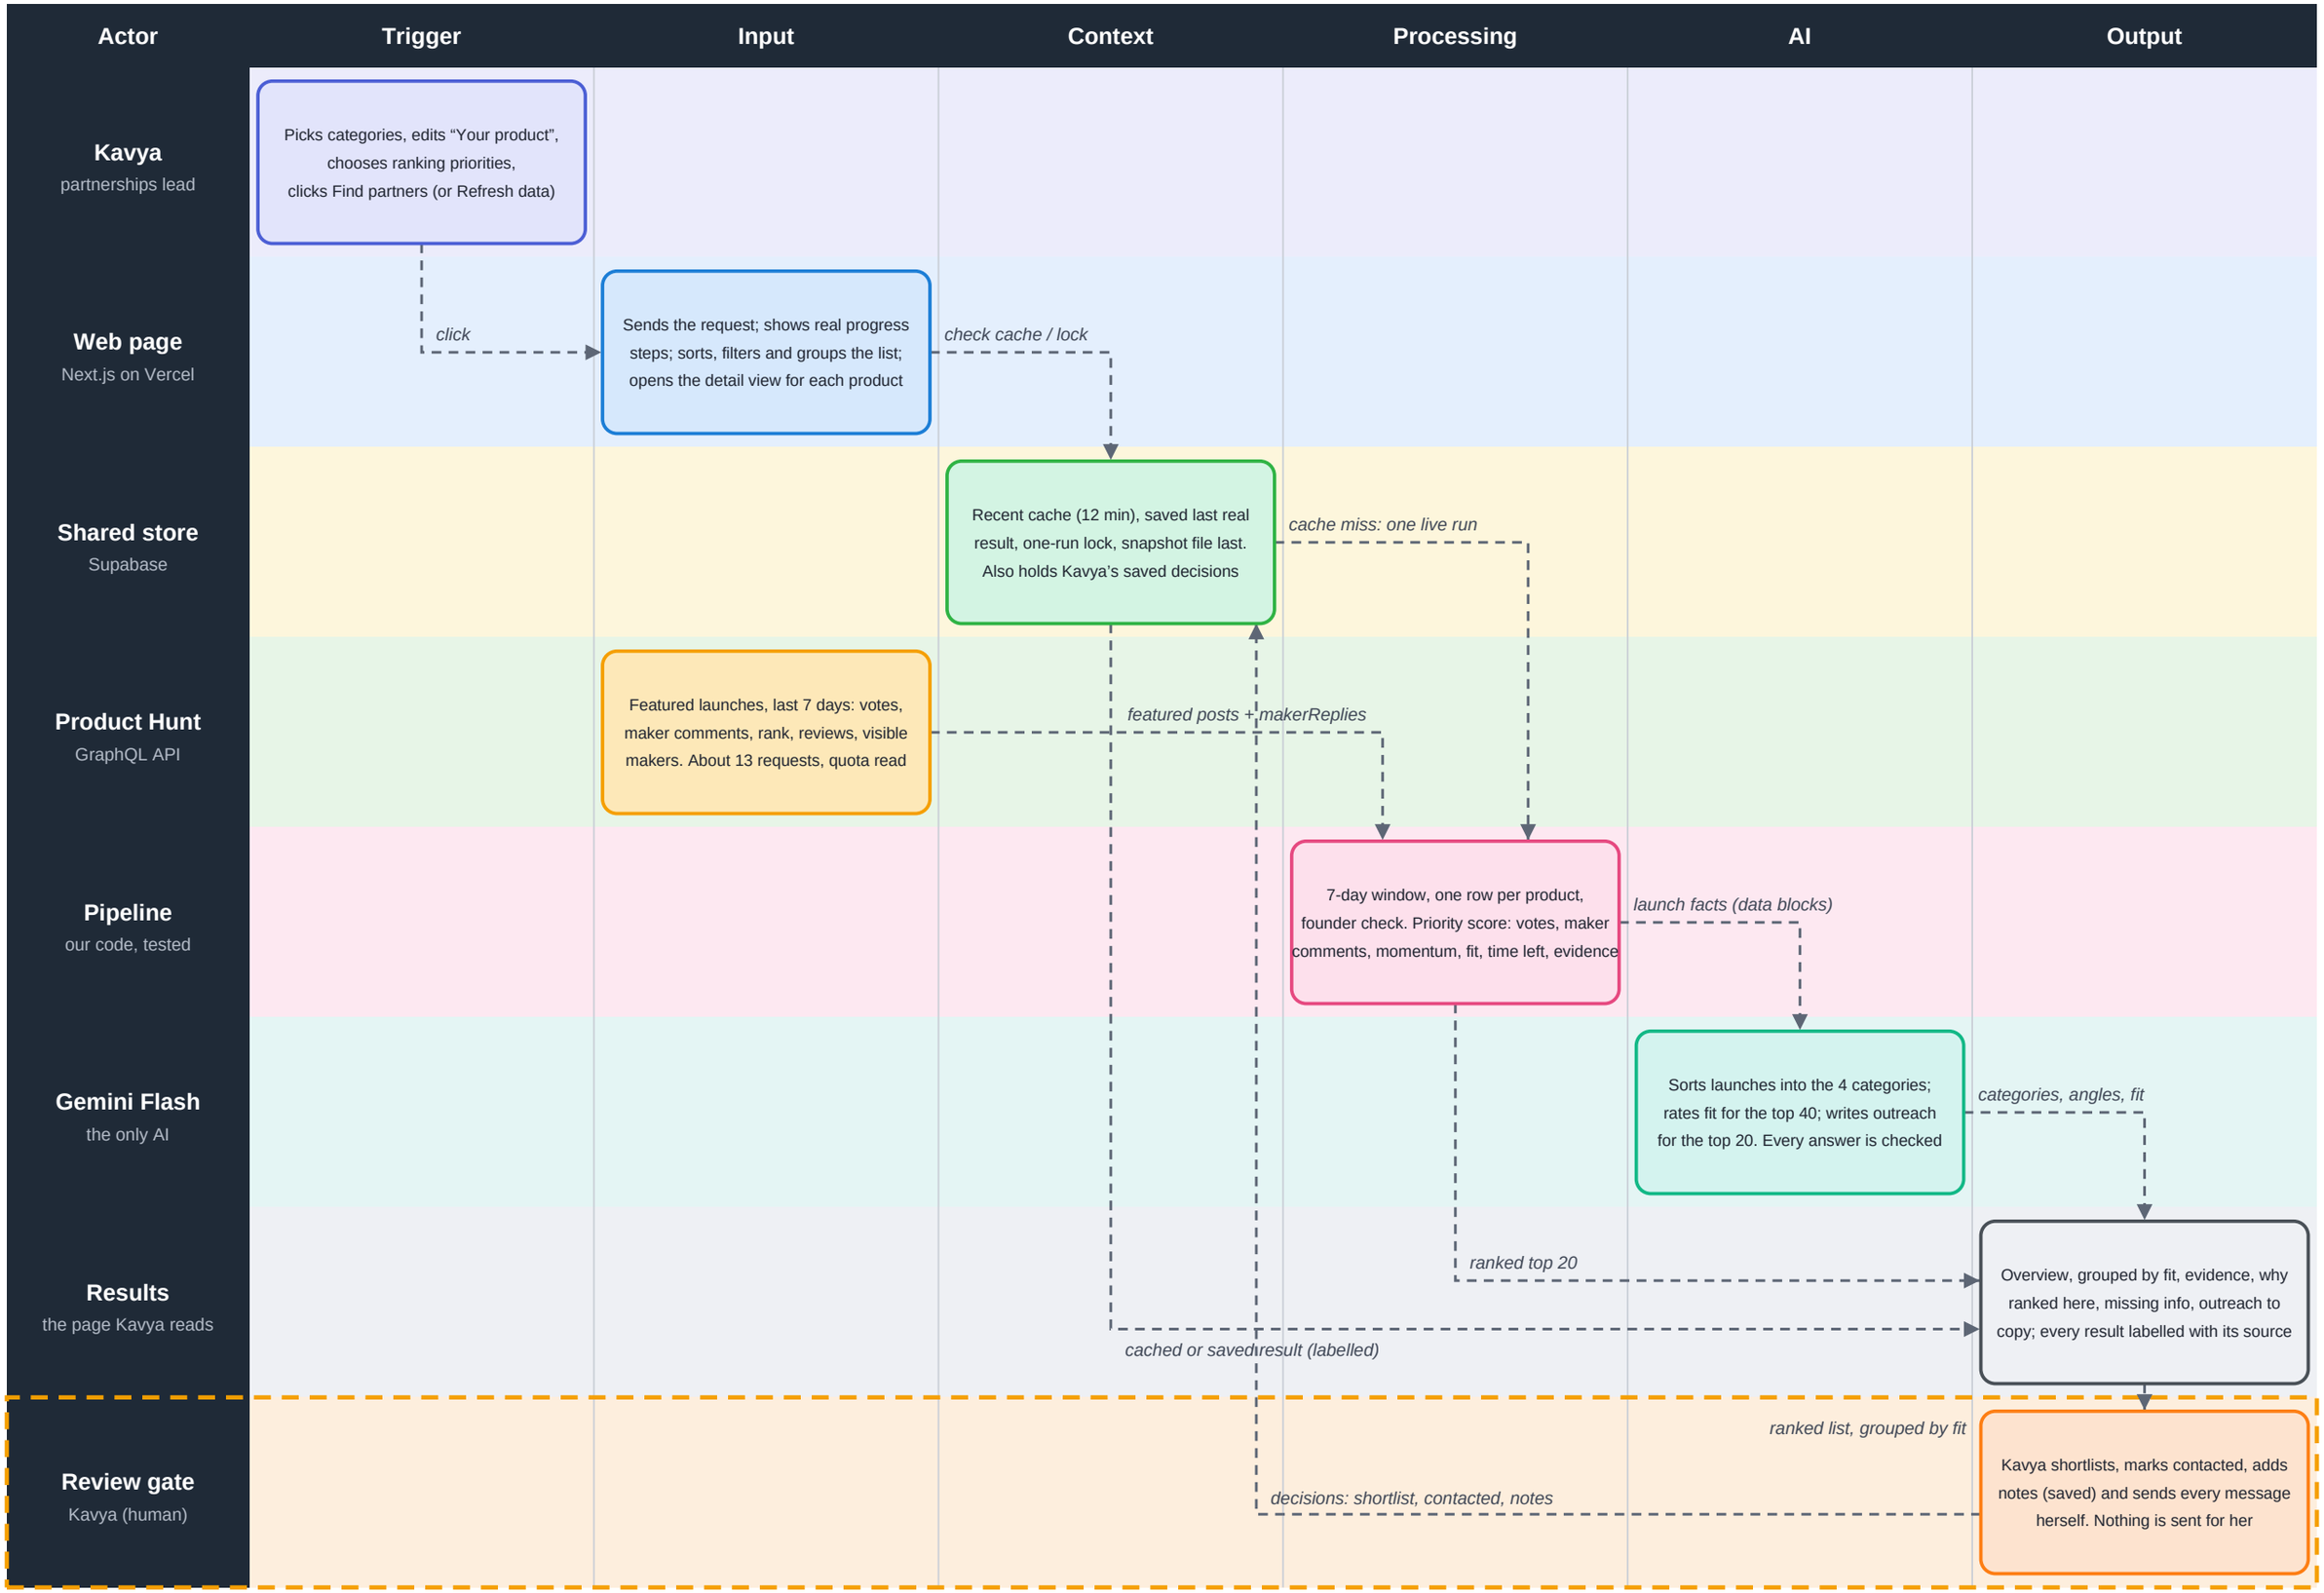
ProductHunt Partnership Scout: Components Map (as built)

Trigger → Input → Context → Processing → AI → Output. A human takes over at the Review gate (dashed). Live data only, never invented; every result says where it came from.



Guardrails in code (300 tests): never fake data (live → cache → saved result → real snapshot → clear error); never shows [REDACTED]; maker comments are Product Hunt’s makerReplies, never total comments; outreach never claims an integration, a goal or a number it was not given; one live run at a time (8 simultaneous visitors → 1 run); labelled template if Gemini fails; keys stay on the server. Stack: Product Hunt API · Gemini Flash · Supabase · Next.js on Vercel.
